

Design and Construction

Control and manage complex projects on time and on budget

Reduce delays and respond to project design issues before construction begins

Design and construction projects are inherently complex. While the architectural and engineering phases may start with highly detailed plans outlined on paper, unforeseen challenges often arise once construction begins. SMART solutions can help you manage your projects, your time lines and your budgets, delivering flexible features that make it easy for you to handle unexpected changes before construction begins.

With the information-sharing and distance collaboration capabilities of SMART solutions, you can bring everyone together in one room, regardless of location. With our line of interactive whiteboards, display products, collaboration software, services and support, you can transform your workplaces into dynamic collaboration spaces where teamwork can thrive. Your project teams can brainstorm, work on schematics and designs, review schedules, and capture and distribute next steps – all without unnecessary travel.

SMART solutions promote genuine collaboration where everyone's input counts and the entire team is working on a common goal. And being able to work on the same document or file with local or remote meeting participants means you can detect design clashes before construction phase, reduce misunderstanding and ultimately complete your projects faster.

“Our new SMART collaboration capability enables people to meet, regardless of where they are in the world, and interact as if they were in the same room. This has had a massive impact on travel costs and reduced our carbon footprint significantly.”

Bola Oshisanwo, Director,
Agile Development Centre,
BT

“SMART’s interactive technology is helping to facilitate cultural change within our organisation. It is allowing our workforce to collaborate quickly and easily on projects.”

David Dryden, Managing Partner, Cundall

“The best thing is being able to change and update information in real time, including the design aspects associated with much of the work we do. And designs can be drawn or altered directly on the board and then saved as they are.”

Victoria Slight, Executive Assistant, Cable and Wireless

Global business has made multiple-location collaboration sessions essential but SMART solutions can make them easy, effective and practical.

With SMART solutions for design and construction, you can:

- **Improve design review and decision making** – share knowledge and identify potential design clashes before construction begins
- **Enhance project team communications** – edit documents or schedules simultaneously with local or remote meeting participants, save your changes and distribute
- **Capture everyone’s input** – annotate over designs and drawings, write notes over your Microsoft® Office and Adobe® application files, or capture whiteboarding notes as PPT or PDF screenshots
- **Boost productivity and efficiency** – save on the cost of misunderstanding by ensuring everyone leaves meetings on the same page
- **Streamline business processes** – manage timelines, complex project requirements and geographically dispersed teams

Clearer, more accurate communication

Three key things can make a difference to your business success. Your people, their ideas and how they work together. That’s what drives SMART solutions – and it means SMART can help you deliver faster, better results across your business.
